

QUESTION NO : 1

```
/* * Name: Kazim Mehdi
 * date: 09 sept 24
 * Desc: print multiple of 3 */
#include<stdio.h>
int main()
{
    int n;
    printf("enter a number");
    scanf("%d", &n); if(n%3==0)
    {
        printf("number is multiple of 3");
    }
    else{
        printf("not multiple of 3");
    }
    return 0;
}
```

QUESTION NO : 2

```

#include<stdio.h>
int main ()
{
    int a , b , add , sub , mult , div ;
    char ch ;
    printf("enter the value of A ");
    scanf("%d",&a);
    printf("enter the value of B ");
    scanf("%d",&b);

    printf(" + for addition \n ");
    printf(" - for subtraction \n ");
    printf(" * for multiplication \n");
    printf(" / for division \n");
    scanf(" %c",&ch);
    switch(ch)
    {
        case '+':
            add = a + b ;
            printf("addition of num1 and num2 is equal to %d \n ",add);
            break;
        case '-':
            sub = a - b ;
            printf("substraction of num1 and num2 is equal to %d \n ", sub);
            break;
        case '*':
            mult = a * b ;
            printf("multiplication of num1 and num2 is equal to %d \n", mult);
            break;
        case '/':
            div = a / b ;
            printf(" division of num1 and num 2 is equal to %d \n", div);
            break;
        default:
            printf("invalid selection");
    }
}

```

QUESTION NO : 3

```
#include<stdio.h>
int main()
{
    char ch;
    ("Enter a single character: ");
    scanf(" %c", &ch);

    printf("'%' is a small alphabet (lowercase letter).\n", ch);

    if (ch >= 'A' && ch <= 'Z')
    {
        printf("'%' is a capital alphabet (uppercase letter).\n", ch);
    }

    else if (ch >= '0' && ch <= '9')
    { printf("'%' is a digit.\n", ch);
    }
    else { printf("'%' is a special character.\n", ch);
    }
    return 0;
}
```

QUESTION NO : 4

```

#include<stdio.h>
int main ()
{
    int cost , discount , finalamount ;
    printf("enter the cost price");
    scanf("%d",&cost);
    printf("the cost price before the discount %d \n",cost);
    if (cost < 1500)
    {
        discount = cost * 0.07 ;
    }
    else if (cost >= 1500 && cost <= 3000)
    {
        discount = cost * 0.12 ;
    }
    else if (cost >= 3000 && cost <= 5000)
    {
        discount = cost * 0.22 ;
    }
    else if (cost > 5000)
    {
        discount = cost * 0.3 ;
    }
    else
    {
        printf("enter the cost on which you get discount ");
    }
    printf("the saved amount %d \n",discount);
    finalamount = cost - discount ;
    printf("the amount after discount %d \n",finalamount);
}

```

QUESTION NO : 6

```

#include<stdio.h>
int main()
{
    int n;
    printf("enter a positive integer:");
    scanf("%d",&n);
    if (n>=1 && n<=9){

        switch (n){
            case 1: printf("one\n");
                    break;
            case 2: printf("two\n");
                    break;
            case 3: printf("three\n");
                    break;
            case 4: printf("four\n");
                    break;
            case 5: printf("five\n");
                    break;
            case 6: printf("six\n");
                    break;
            case 7: printf("seven\n");
                    break;
            case 8: printf("eight\n");
                    break;
            case 9: printf("nine\n");
                    break;
            default:

                printf("unexpected case.\n");
                break ;
        }
    }

    else if (n>9)
    {
        printf("greater than 9\n");
    }

    else
    {
        printf("the number is not positive.\n");
    }

    return 0;
}

```

QUESTION NO : 5

```

#include<stdio.h>
int main()
{
    int coustmerID,unitsconsumed ;
    char coustmerName[50];
